---

PROJECTS

Facebook Clone
- Developed a replica of Facebook, emphasizing essential features and user interface elements of the original platform.
- Designed a responsive layout to ensure a seamless user experience across different screen sizes.
- Implemented elements such as navigation menu, user profile, and basic feed functionality using JavaScript.

Brew (!net websites can't be uploaded on github)
- Created a fully functional coffee shop website with a dynamic product catalog where users can view and add multiple products to their cart.
- Implemented a CRUD (Create, Read, Update, Delete) functionality to manage product details and inventory effectively.
- Used the MVC architecture and ensure modular development, with SQL Server for efficient data storage and retrieval.

Secure (Meter Management System)
- Built a website for showcasing the product Meters developed by the company Secure Meters also providing the Management System to Admin to monitor and control the production and availability of utility meters in real-time.
- Made a feature called Biller, enabling users to calculate the total amount payable for electricity usage based on per-unit consumption.
- Used SQL Server for efficient management of utility meter records.
- Developed the application using the ASP.NET MVC framework.

EXPERIENCE

Appears Technologies | SMM
- APPWARS Technologies specializes in educational workshops and corporate training. Completed digital marketing tasks for the company.

Ticktech IT Solutions | Web Developer
- App Development & Web Development Company. Worked on the JAR WATER SYSTEM website for front-end development. The Jar Water Management System is a simple way to store and share water in areas where it's scarce. People use large jars or tanks to collect and save water for drinking, cooking, or farming. It helps everyone get enough water and use it wisely.

Warrgyiz Morsch | Content Writing   (1 March - 1 April) 2024
- Worked as a content writer for 1 month

Econnect Solutions | Backend Developer   (1 April - 1 October) 2024
- Worked as a backend developer in Rajasthan Smapark 2.0, focusing on implementing and optimizing backend functionalities. Rajasthan Sampark is a grievance redressal portal and helpline launched by the Government of Rajasthan. It allows citizens to register complaints related to government services and departments online or via a toll-free number. The platform ensures transparency, accountability, and timely resolution of grievances through digital tracking and departmental coordination.

Freelancing | Graphic Designing
- Created flyers and posts for cafes, logos, and business cards for yoga instructors and wedding store

---
